PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building large-scale customer engagement platforms, AI-powered automation systems, and internal business applications. Experienced in developing scalable React and Node.js applications, designing REST APIs, integrating LLM workflows, and deploying production systems serving enterprise and government clients.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python

Frontend: React.js, Next.js, Tailwind CSS

Backend: Node.js, Express.js, RESTful APIs, Fast API

Databases: MongoDB, PostgreSQL

DevOps & Tools: Git, GitHub Actions, Docker, Coolify, RabbitMQ, Redis, VPS

PROFESSIONAL EXPERIENCE

Full Stack Developer | Mednex Research Solutions June 2026 - August 2025

- Designed an autonomous copywriting state machine using a custom directed graph architecture with dynamic stage detection and framework selection, scaling personalized outreach to 1000s of leads across 50+ clients.
- Engineered a context-aware generation pipeline that dynamically pulls past high-performing copy and synthesizes business briefs, reducing manual copy generation turnaround time from hours to 30 seconds per campaign while improving conversion rates.
- Built a multi-agent Deep Research RAG pipeline integrating Tavily (parallel market search) and Firecrawl (competitor scraping) to extract firmographics and buyer personas, reducing manual market research time by over 95%.

Summer Intern | EY April 2026 - June 2026

- Architected a scalable WhatsApp Customer Engagement Platform for EPFO targeting 5M+ users. Led the migration of the message brokering system from RabbitMQ to Redis Streams, consciously avoiding Kafka to minimize operational overhead while successfully supporting 1M+ active campaign users.
- Spearheaded the decoupling of a monolithic architecture into independently scalable microservices. Isolated webhook listeners to independently auto-scale and process millions of asynchronous inbound/outbound WhatsApp events without bottlenecking core services.
- Designed a highly optimized vernacular messaging system for nationwide accessibility. Reduced external API dependency and slashed bot response latency by pre-computing and caching static content translations in bulk, entirely eliminating the need for runtime translation.
- Implemented a custom Idempotency framework to guarantee exactly-once processing of webhook events, eliminating duplicate metric counts. Built real-time analytics pipelines to monitor delivery rates, engagement, and campaign performance for 1M+ beneficiaries.

Software Developer Intern | Codechip Studios Nov 2025 - March 2026

- Developed REST APIs powering a freight-forwarding automation platform, enabling quotation generation and automated email workflows.
- Built backend services for an AI-powered JEE DPP generation system using PostgreSQL and Prisma ORM.

PROJECTS

Note-Taking Application | Visit | GitHub March 2026 - April 2026

React.js, Node.js, Express.js, MongoDB, Context API, JWT

- Developed a responsive full-stack note management platform supporting secure authentication and complete CRUD operations using React, Node.js, Express, MongoDB, and JWT.
- Designed reusable React components with Context API for centralized state management, improving maintainability and reducing prop drilling.

Quiz Management Platform | Visit | GitHub Oct 2024 - Dec 2024

React.js, Node.js, Express.js, MongoDB, JWT, bcrypt, Tailwind CSS, Recharts

- Built a role-based quiz management platform enabling administrators to create, schedule, and manage quizzes through a centralized dashboard.
- Developed interactive analytics dashboards and real-time leaderboards using Recharts, providing instant visibility into participant performance.

EDUCATION

B.Tech in Information Technology Nov 2022 - June 2026

Bharati Vidyapeeth's College of Engineering, New Delhi

CGPA: 8.77 / 10.0

CERTIFICATIONS & ACHIEVEMENTS

- Full Stack Web Development (MERN Stack), Data Structures & Algorithms (Java) - Coding Blocks
